PROFILE

DevOps engineer and full-stack developer (mostly backend), studying for a B.Sc. in Computer Science. I build services in Python (FastAPI, Django) and Go, with React or Next.js frontends when needed, and run them on hardened Linux servers with Docker Compose, CI pipelines with security gates, and Prometheus alerting. Founder of Nerkhbaan and co-founder of Dolphin CRM: two products I built and run with least-privilege databases, scripted rollbacks, and restore-tested backups.

EXPERIENCE

DevOps Engineer · OTICAMP

Jun 2025 — Present · Tehran, Iran

- Provisioned and hardened Linux VPS environments; Ansible playbooks keep server setup consistent between development and production.
- Deployed a Prometheus, Grafana, and Loki stack for system metrics and logs.
- Built ChatOps automation in n8n that routes Prometheus alerts and Jira events into Matrix rooms and direct messages.
- Deployed and run Keycloak for centralized sign-in across internal services.

Founder · Nerkhbaan

2026 — Present · Tehran, Iran

- Built the FastAPI, TimescaleDB, and Redis backend, the React web and admin apps, and an Electron desktop app.
- Operate it on a Compose stack behind Nginx with two API replicas, Prometheus alerting, and CI gates covering integration tests, browser tests, and Trivy image scans.

Co-founder · Dolphin CRM

2026 — Present · Tehran, Iran

- Built the Django/PostgreSQL platform with 40 switchable feature modules, shipped as tagged releases.
- Designed the deployment model: isolated Compose stacks, a signed feature manifest, least-privilege database roles, scripted rollback, and restore-verified backups.

Freelance DevOps & Linux Administrator · Self-employed

Dec 2024 — Jun 2025 · Remote

- Wrote Bash automation for routine maintenance, backups, and log rotation.
- Audited client servers; configured firewall rules and TLS certificates.
- Tuned Nginx and Apache configurations, including reverse proxying and load balancing.

SELECTED PROJECTS

Nerkhbaan · Founder

nerkhbaan.ir

A price platform I founded for gold, currencies, and crypto, with history, alerts, and web, admin, and desktop apps. Every price shows its source time and expires instead of going stale.

Built the whole product: FastAPI, TimescaleDB, Redis, React web and admin apps, an Electron desktop app, and a Go feed sidecar.

FastAPI · TimescaleDB · Redis · React · Electron · Go · Docker · Nginx · Prometheus · GitHub Actions · Trivy

Dolphin CRM · Co-founder `github.com/Ilia-Shakeri/Dolphin`

A Persian-first CRM/ERP I co-founded: leads, quotations, invoices, payments, inventory, telephony, and after-sales in one live RTL panel. Each installation runs as its own isolated stack.

Lead engineer on the Django app: 40 switchable feature modules and a live-updating RTL panel.

`Django · Python · PostgreSQL · Docker · Nginx · Gunicorn · Asterisk · Selenium · GNU Bash`

Prometheus & Jira → Matrix bridges `github.com/Ilia-Shakeri/n8n-prometheus-matrix-bridge`

Two n8n workflows that bring Prometheus alerts and Jira updates into the team's Matrix chat. Alertmanager webhooks become colour-coded firing/resolved messages with a link to the Prometheus graph.

`n8n · Prometheus · Matrix · Jira`

Also: Stackplore (Go), Matrix User Manager (GNU Bash), LinSecGuard (GNU Bash), EasyCert (OpenSSL), CipherCert (Python), SysTrack (GNU Bash), Automated Backup Script (GNU Bash), Clockwork OrangeHRM (GNU Bash).

TECHNICAL SKILLS

Linux & infrastructure
Linux, Ubuntu, CentOS, Alpine Linux, systemd, LVM, NFS, Terraform, Ansible

Delivery & automation
GitHub Actions, GitLab CI/CD, Git, GitHub, n8n, GNU Bash, Make

Web, network & security
Nginx, Apache, Traefik, Caddy, OpenSSL, Let's Encrypt, Keycloak, Trivy, UFW / iptables, Active Directory

Languages & frameworks
Python, Go, TypeScript, JavaScript, SQL, FastAPI, Django, Flask, SQLAlchemy, Pydantic, Gunicorn, React, Next.js, Node.js, Vite, Tailwind CSS, Electron, OpenAPI, pytest, Playwright, Selenium

Containers & orchestration
Docker, Docker Compose, Docker Swarm, Kubernetes, Helm

Monitoring & observability
Prometheus, Alertmanager, Grafana, Loki, Elasticsearch, Logstash, Kibana

Data & messaging
PostgreSQL, TimescaleDB, MySQL, MariaDB, Galera Cluster, Redis, SQLite, RabbitMQ, MinIO

Collaboration & ChatOps
Matrix, Element, Jira, Telegram Bot API, Asterisk / FreePBX

EDUCATION

B.Sc. Computer Science
In progress · since Oct 2026

LANGUAGES

Persian (native) · English (professional working)

TRAINING

DevOps for Intermediates · CanDo IT Academy, Feb 2026 · ID 04/30289

DevOps for Beginners · CanDo IT Academy, Jul 2025 · ID 02/20889

LPIC-2 training course · TOSINSO, Jun 2025

LPIC-1 training course · CanDo IT Academy, Jan 2025 · ID 03/17758
