DEVOPS ENGINEER / [YOUR LOCATION]

Built to ship.
Built to stay up.

I'm [Your name]. I turn complex infrastructure into reliable systems—so teams can build, deploy, and move forward with confidence.

SYSTEMS IN ORBIT / v.01

```
portfolio ~ main                                  ● READY
$ deploy --env future --with confidence
√ Let's build something resilient.
```

SCROLL TO EXPLORE

MY OPERATING LAYER
+ CLOUD INFRASTRUCTURE
+ DELIVERY AUTOMATION
+ RELIABILITY & OBSERVABILITY

01 / THE HUMAN LAYER

```
$ whoami
```

NAME
[Your name]

ROLE
DevOps Engineer

BASED IN
[City, Country]

FOCUS
Cloud · Platform · Reliability

```
// A starting point, not a claim.
// Replace every [field] with your story.
```

A systems thinker.
A builder at heart.

[Your short bio] I work at the intersection of code, cloud, and operations. My focus is making the path from a developer's first commit to a healthy production service simpler, safer, and repeatable.

[Your approach] I enjoy untangling infrastructure, documenting what matters, and replacing manual work with thoughtful automation. Outside the terminal, you'll find me [your interests or community involvement].

Automate the repeatable.

Less toil. More room to build.

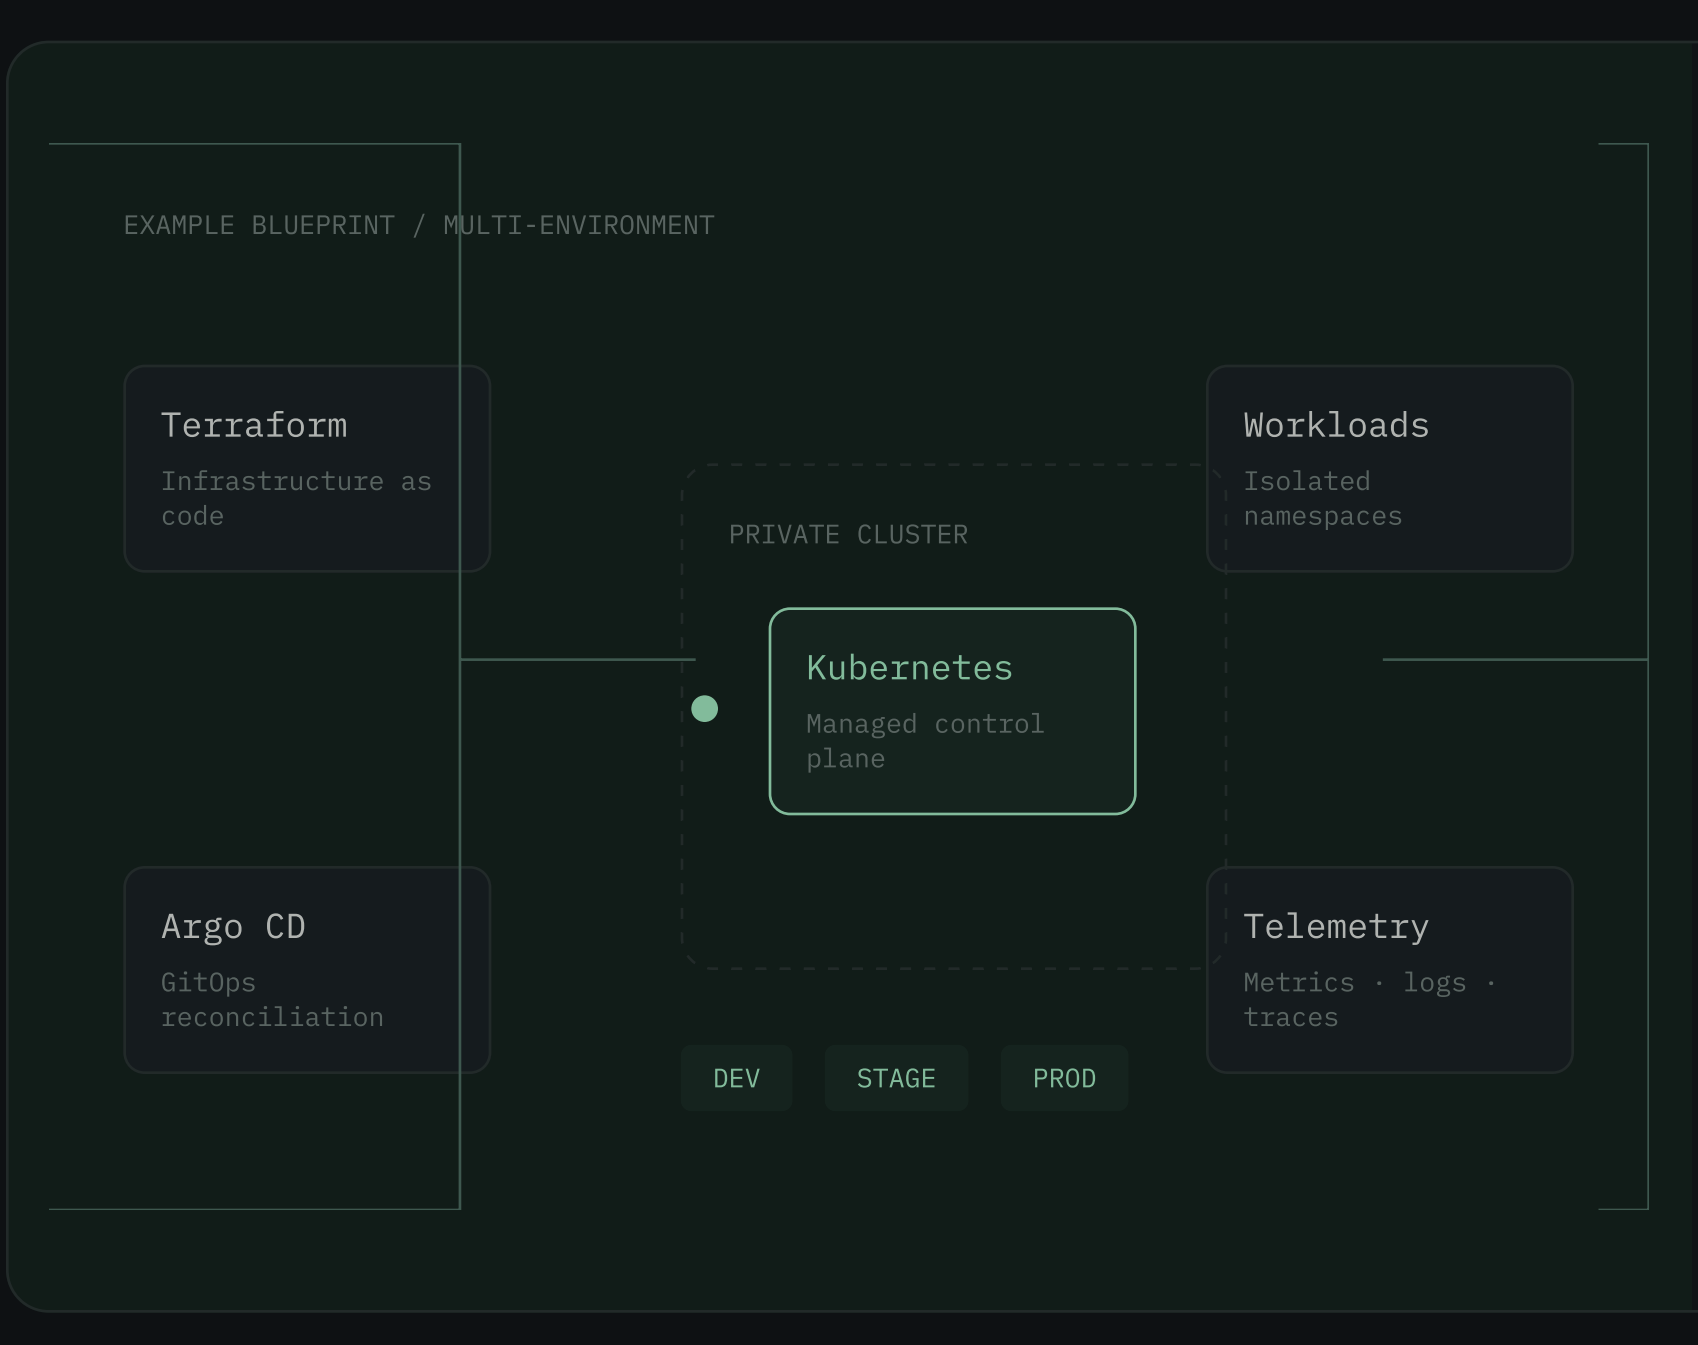
Make reliability visible.

Clear signals. Better decisions.

02 / SELECTED BUILDS

Complex problems.
Practical systems.

Three example project stories. Replace the names, architecture, contributions, and sample outcomes with your own work.



01 / CLOUD PLATFORM / EXAMPLE

[Project name] · [Year] · [Your role]

A Kubernetes foundation, designed to scale.

[Project details] A reproducible cloud platform with isolated environments, GitOps delivery, and policy-driven access. Add your architecture decisions and specific contribution here.

Kubernetes · Terraform · Argo CD · AWS

EXAMPLE OUTCOME / 3 environments. 1 source of truth.
[Replace with your verified impact.]

View project [link] ↗

main / release.yml — √ ALL CHECKS PASSED

Commit · Test · Build · Scan · Deploy

Sample run: 06m 12s — staging → production

02 / DELIVERY AUTOMATION / EXAMPLE

[Project name] · [Year] · [Your role]

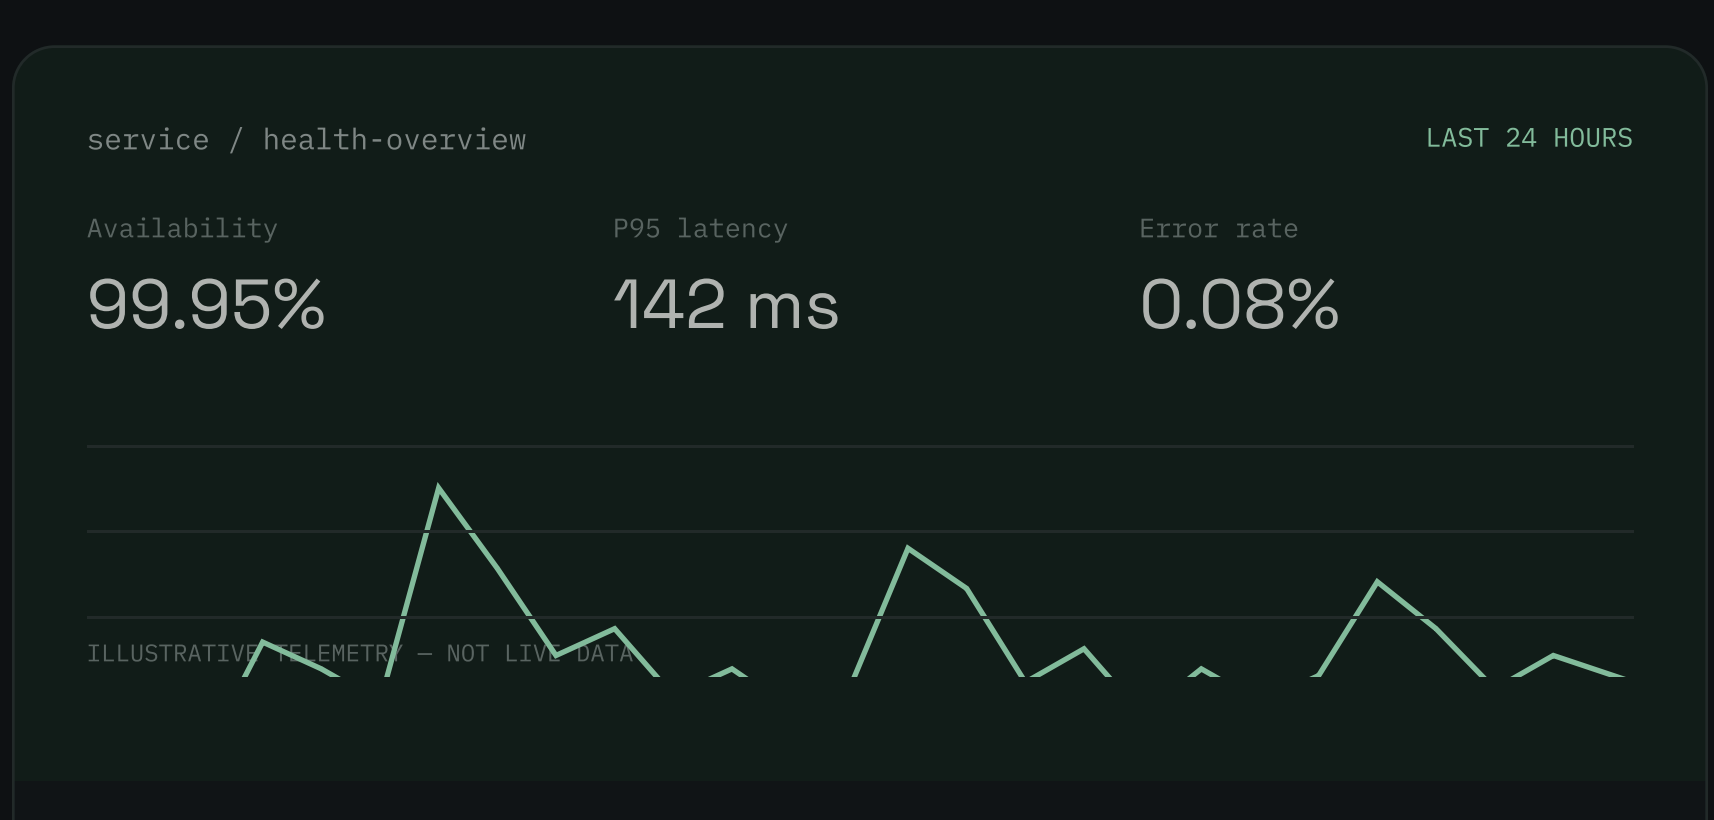
From commit to production. Without the manual steps.

[Project details] A secure CI/CD pipeline with automated tests, image scanning, progressive deployment, and a clear rollback path. Describe the bottleneck you solved.

GitHub Actions · Docker · Helm

EXAMPLE OUTCOME / Release time: 24 → 6 minutes.
[Replace with your measured results.]

View project [link] ↗



service / health-overview — LAST 24 HOURS

Availability	P95 latency	Error rate
99.95%	142 ms	0.08%

03 / OBSERVABILITY / EXAMPLE

[Project name] · [Year] · [Your role]

Less noise. More signal. A clearer view of production.

[Project details] A shared view of service health using metrics, logs, and traces. SLO dashboards and actionable alerts put the right context in front of the team.

Prometheus · Grafana · OpenTelemetry

EXAMPLE OUTCOME / Detect issues before escalation.
[Add your verified reliability improvement.]

View project [link] ↗

`// All project content and metrics are illustrative placeholders, not personal achievement claims.`

03 / TECHNICAL TOOLKIT

The right tools.
For the right problem.

A sample stack, organized by purpose—not proficiency bars. Keep the tools you use and add the depth you bring.

Cloud & infrastructure

AWS / Azure / GCP
Terraform / Ansible

Provisioning · Networking · IAM

Containers & orchestration

Docker / Kubernetes
Helm / Argo CD

Workloads · GitOps · Scaling

Delivery & automation

GitHub Actions / GitLab CI
Jenkins / Bash

Build · Test · Release

Observability & reliability

Prometheus / Grafana
OpenTelemetry / ELK

Metrics · SLOs · Incident response

Code & operating systems

Python / Go / YAML
Linux / Git

Scripting · Tooling · System design

Security & collaboration

Vault / Trivy / OPA
Runbooks / Technical docs

Secrets · Policies · Shared knowledge

[Customize this stack to reflect your actual experience.]

04 / EXPERIENCE

A career in building better.

[Your career summary] Share the teams you've supported, the systems you've shaped, and the impact you can stand behind.

```
// Replace roles, employers, dates,
// and achievements with your résumé.
```

[Current role title]

[YYYY] — PRESENT

[Current employer] · [Location / Remote]

[Scope] Own cloud infrastructure and delivery tooling for [team / product]. Partner with engineering to create secure, repeatable paths to production.

[Achievement] Reduced [manual work / deployment time] by [verified result] through [your initiative].

Platform engineering · Cloud infrastructure

[Previous role title]

[YYYY] — [YYYY]

[Previous employer] · [Location]

[Scope] Built CI/CD workflows and improved visibility into production services. Supported on-call operations and documented recovery procedures.

[Achievement] Improved [reliability metric] from [baseline] to [result] by [specific contribution].

Delivery automation · Observability

[Earlier role / internship]

[YYYY] — [YYYY]

[Employer] · [Location]

[Scope] Supported Linux systems, scripted repeatable tasks, and contributed to infrastructure maintenance and internal tools.

[Achievement] Automated [process] to save [verified hours] per [week / month].

Linux operations · Automation

05 / HOW I WORK

Built in loops, not silos.

[Your workflow] A practical approach to DevOps: shared context, small changes, and feedback that reaches the next build.

01 →

Understand

Map the system, the constraints, and what success looks like.

OUTPUT / A CLEAR BASELINE

02 →

Codify

Turn infrastructure and policies into versioned, reviewable code.

OUTPUT / REPEATABLE SYSTEMS

03 →

Ship safely

Test, scan, and release in small steps—with a rollback plan.

OUTPUT / CONFIDENT DELIVERY

04 →

Observe & refine

Measure service health, learn from incidents, and reduce toil.

OUTPUT / CONTINUOUS IMPROVEMENT

Reliability is never "done." Every deploy, alert, and retrospective feeds the next improvement. FEEDBACK → FORWARD

06 / EDUCATION & CERTIFICATIONS

Always in learning mode.

EDUCATION

[Degree / qualification]

[University / institution]

[YYYY] — [YYYY] / [LOCATION]

[Relevant coursework, research, or capstone] Add the learning that shaped your approach to systems and engineering.

[Cloud certification] ↗

[ISSUER] · [YEAR] · [CREDENTIAL LINK]

e.g. AWS Solutions Architect — replace with yours

[Kubernetes certification] ↗

[ISSUER] · [YEAR] · [CREDENTIAL LINK]

e.g. Certified Kubernetes Administrator — replace with yours

[Additional certification] ↗

[ISSUER] · [YEAR] · [CREDENTIAL LINK]

e.g. Terraform Associate — replace with yours

07 / THE TAKEAWAY

The full picture.
In one document.

Experience, technical skills, education, and selected work.
[Add your résumé PDF and update the details below.]
