PROFILE

DevOps and backend engineer. I build services in Python (FastAPI, Django) and Go and operate them in production: Linux administration, Docker Compose deployments, CI pipelines with security gates, monitoring, and tested backup recovery. React and Next.js when a product needs a frontend. Founder of Nerkhbaan and co-founder of Dolphin CRM; studying for a B.Sc. in Computer Science.

EXPERIENCE

DevOps Engineer · OTICAMP (Employment)

Jun 2025 — Present · Tehran, Iran

- Provision and harden Linux infrastructure with Ansible, keeping development and production configuration consistent.
- Deploy and maintain Prometheus, Grafana, and Loki for infrastructure metrics and logs.
- Built n8n automation that routes Prometheus alerts and Jira events to Matrix channels and direct messages.
- Deploy and operate Keycloak for centralized authentication across internal services.

Founder & Engineer · Nerkhbaan (Own product)

2026 — Present · Tehran, Iran

- Built the FastAPI, TimescaleDB, and Redis backend, a Go feed sidecar, the React web and admin apps, and an Electron desktop app.
- Run it on Docker Compose with two API replicas behind Nginx; release 2.8.1 passed 15 CI jobs, including integration tests, browser tests, and Trivy image scans.
- Load-tested an isolated copy of the stack: 27,000 of 27,000 requests succeeded over 30 minutes, p95 323 ms.

Co-founder & Lead Engineer · Dolphin CRM (Co-founded product)

2026 — Present · Tehran, Iran

- Lead development of the Django and PostgreSQL application: 46 feature flags and about 3,640 automated tests.
- Designed the deployment model: an isolated Compose stack per installation, a signed feature manifest, and non-superuser database roles with per-table grants.
- Built scripted deploy and rollback and backups that are verified by restoring them.

DevOps & Linux Administrator · Self-employed (Freelance)

Dec 2024 — Jun 2025 · Remote

- Wrote Bash automation for routine maintenance, backups, and log rotation.
- Audited client servers; configured firewall rules and TLS certificates.
- Tuned Nginx and Apache configurations, including reverse proxying and load balancing.

SELECTED PROJECTS

Nerkhbaan · Founder & sole engineer

nerkhbaan.ir

A price platform for gold, currencies, and crypto with history, alerts, and web, admin, and desktop apps. Every quote names its source and time and carries an explicit expiry, so an outdated price is never shown as current.
Status: Live at nerkhbaan.ir (release 2.8.1).
Built the whole product: FastAPI API, TimescaleDB and Redis data layer, React web and admin apps, an Electron desktop app, and a Go feed sidecar.
FastAPI · TimescaleDB · Redis · Go · React · Electron · Docker Compose · Nginx · GitHub Actions · Prometheus · Trivy

Dolphin CRM · Co-founder & lead engineer — github.com/Ilia-Shakeri/Dolphin

A Persian-first CRM/ERP for sales, quotations and invoicing, payments, inventory, telephony, and after-sales. One codebase is deployed separately for each customer, and each installation runs as its own isolated Docker Compose stack. Status: Release 2.40.55 (October 2026).

Lead the engineering of the Django and PostgreSQL application: 46 feature flags, a right-to-left interface, and server-sent live updates.

Django · Python · PostgreSQL · Docker Compose · Nginx · Gunicorn · Asterisk · Selenium · GNU Bash

Stackplore · Author & sole engineer — github.com/Ilia-Shakeri/Stackplore

A self-hosted workspace that brings Docker and Kubernetes inventory, health, topology, logs, metrics, and events into one versioned API and an English/Persian interface. It is read-only by default and built for troubleshooting, not as a control plane. Status: Pre-1.0: 0.7.0 in progress, latest tag v0.6.0.

Designed and built the Go API, PostgreSQL schema, provider adapters, and the React interface from one OpenAPI contract.

Go · PostgreSQL · Kubernetes · Docker · Helm · OpenAPI · React · TypeScript

Prometheus & Jira → Matrix bridges — github.com/Ilia-Shakeri/n8n-prometheus-matrix-bridge

Two n8n workflows that bring Prometheus alerts and Jira updates into the team's Matrix chat. Alertmanager webhooks become colour-coded firing/resolved messages with a link to the Prometheus graph.

n8n · Prometheus · Matrix · Jira

Also: Matrix User Manager (GNU Bash), LinSecGuard (GNU Bash), SysTrack (GNU Bash), Automated Backup Script (GNU Bash), EasyCert (OpenSSL), CipherCert (Python), Clockwork OrangeHRM (GNU Bash).

TECHNICAL SKILLS

Linux & infrastructure
Linux, Ubuntu, CentOS, Alpine Linux, systemd, LVM, NFS, Terraform, Ansible

Containers & orchestration
Docker, Docker Compose, Docker Swarm, Kubernetes, Helm

Delivery & automation
GitHub Actions, GitLab CI/CD, Git, GitHub, n8n, GNU Bash, Make

Monitoring & observability
Prometheus, Alertmanager, Grafana, Loki, Elasticsearch, Logstash, Kibana

Web, network & security
Nginx, Apache, Traefik, Caddy, OpenSSL, Let's Encrypt, Keycloak, Trivy, UFW / iptables, Active Directory

Data & messaging
PostgreSQL, TimescaleDB, MySQL, MariaDB, Galera Cluster, Redis, SQLite, RabbitMQ, MinIO

Languages & frameworks
Python, Go, TypeScript, JavaScript, SQL, FastAPI, Django, Flask, SQLAlchemy, Pydantic, Gunicorn, React, Next.js, Node.js, Vite, Tailwind CSS, Electron, OpenAPI, pytest, Playwright, Selenium

Collaboration & ChatOps
Matrix, Element, Jira, Telegram Bot API, Asterisk / FreePBX

EDUCATION

B.Sc. Computer Science
In progress · since Oct 2026

LANGUAGES

Persian (native) · English (professional working)

TRAINING

DevOps for Intermediates · CanDo IT Academy, Feb 2026 · ID 04/30289

DevOps for Beginners · CanDo IT Academy, Jul 2025 · ID 02/20889

LPIC-2 training course · TOSINSO, Jun 2025

LPIC-1 training course · CanDo IT Academy, Jan 2025 · ID 03/17758
